

PROJECT REQUIREMENTS DOCUMENT

Zaplo: Browser-Based Gaming Website

1. Project Overview

Zaplo is a browser-based gaming website where visitors discover and play HTML5 and WebGL games instantly with no downloads or account creation. The platform hosts 20 games across 6 categories, with an emphasis on multiplayer and .io titles, and a Share to Play feature that copies a game link to the clipboard in one click.

Product Name	Zaplo
Tagline	One click. One game. Zero wait.
Game Catalog	20 HTML5 and WebGL games across 6 categories
Deployment	Vercel, Netlify, or Cloudflare Pages (free tier)

2. Pages and Structure

4 page templates + 4 static pages.

Page	File	Key Requirements
Home	index.html	Nav bar, Now Playing hero spotlight, Trending row of 6, Multiplayer Picks row of 6, 6 category tiles, AdSense banner, footer
Category	category.html?cat=	Grid filtered by URL param, real-time search, category title and description, breadcrumb, 4 to 2 column reflow
Game Detail	game.html?slug=	AdSense banner, 16:9 iframe, fullscreen toggle, title, description (max 60 words), controls hint, Share to Play button, 4 related cards
Static (x4)	about / contact / privacy / terms	Single column, max-width 720 px, same header and footer, H1/H2/paragraph only. Contact uses mailto. Privacy discloses GA4 + Clarity cookies

3. Share to Play

A Share to Play button appears on every game detail page, below the game title. It is the static, client-side equivalent of a play-with-friends feature and needs no backend.

Property	Specification
Button location	Game detail page, below the game title
URL copied	zaplo.gg/game.html?slug=<slug>&ref=share
Copy method	navigator.clipboard.writeText(), execCommand fallback
Success feedback	Toast 'Link copied' visible for 2 seconds
Failure feedback	Toast 'Copy failed' visible for 2 seconds
Analytics	GA4 share_click event with the game slug

4. Content Requirements

Game cards: 480x270 px thumbnail, title (max 26 characters), one category badge, MP badge if multiplayer, link to detail page. Game data fields: title, slug, thumbnail, category, description (under 60 words), controls hint (one line), iframe or embed URL, multiplayer flag, up to 4 related games. No lorem ipsum, no descriptions over 60 words, no marketing paragraphs.

5. Design and Visual Requirements

Color Palette

Role	Name	Hex
Primary (CTA buttons)	Electric Lime	#B6FF3C
Secondary (links, active)	Plasma Purple	#8B5CF6
Accent (share, MP badge)	Hot Magenta	#FF2E93
Background	Carbon Black	#0A0A12
Surface	Slate Panel	#1A1A2E
Text	Bright White	#FAFAFF

All text must meet WCAG AA contrast. Dark theme by default. No rainbow palettes or inconsistent CTA colors.

Typography

Display and headings: Space Grotesk or Sora. Body: Inter or Roboto. Maximum two font families. Size scale: 14, 16, 22, 28, 36, 48 px. Minimum 16 px body on mobile. Use font-display: swap or self-host fonts. No script or decorative fonts.

Layout

12-column grid desktop, 4-column mobile. 16 px base spacing. Max content width 1280 px. Card gap minimum 16 px. Header: 80 px desktop, 64 px mobile. No horizontal scroll from 320 px upward. Allowed visuals: game thumbnails, category badges, MP badge, Lucide icons, one logo wordmark, one OG card per page, empty-state illustrations (unDraw). No stock photos, 3D renders, or animated GIFs in layout.

6. Performance and Technical Requirements

Requirement	Target
Lighthouse Mobile Performance	85 or above
First Contentful Paint (4G)	Under 2 seconds
Game iframe load (4G)	Under 3 seconds
JS payload (outside iframes)	Max 220 KB
Browser support	Chrome, Firefox, Safari, Edge (latest 2 versions)
Console errors	Zero on all pages

All filtering and search is client-side. Defer non-critical scripts. Lazy-load thumbnails below the fold.

7. Launch Game Catalog

20 games at launch.

#	Title	Slug	Category
01	Tank Arena	tank-arena	Multiplayer
02	Bullet Storm	bullet-storm	Shooting
03	Drift Empire	drift-empire	Racing
04	Block Royale	block-royale	.io

#	Title	Slug	Category
05	Stick War	stick-war	Action
06	Word Wars	word-wars	Puzzle
07	Sky Duel	sky-duel	Multiplayer
08	Snake .io	snake-io	.io
09	Krunker Lite	krunker-lite	Shooting
10	Chess Duel	chess-duel	Multiplayer
11	Drift Battles	drift-battles	Racing
12	Memory Match	memory-match	Puzzle
13	Stick Fight	stick-fight	Action
14	Bubble Pop	bubble-pop	Puzzle
15	Pixel Racer	pixel-racer	Racing
16	Cube .io	cube-io	.io
17	Mini Golf	mini-golf	Puzzle
18	Zombie Rush	zombie-rush	Action
19	Snipe Master	snipe-master	Shooting
20	Tic Tac Toe+	tic-tac-toe	Multiplayer

8. Asset References

The reference images show the target look and layout for Zaplo. They are visual direction only. The build recreates the same structure with Zaplo branding, the Zaplo palette, and the 20-game catalog in Section 7. No third-party game art, logos, or thumbnails from these references may be copied into the build.

Logo in PNG (dark background)

9. SEO and Analytics

SEO

- SEO-friendly URLs (/game/slug, /category/slug), unique title and meta description per page
- Open Graph tags on game detail and category pages
- sitemap.xml covering all public pages, robots.txt allowing all crawlers, canonical tags on parameterized views

Google Analytics 4

GA4 tag fires on every page. Defer analytics scripts. Microsoft Clarity for heatmaps. Five custom events required:

Event	Trigger
game_start	Game iframe loads on detail page
game_end	User leaves the game detail page
share_click	User clicks the Share to Play button
category_click	User selects a category
search_used	User submits a search query

10. Owner-Provided and Developer-Produced Assets

Owner provides

- Logo concept, brand palette, and the domain zaplo.gg
- 20 shortlisted games
- All page copy, game descriptions, and meta tags
- Google AdSense account and Google Analytics 4 property

Developer produces

- All HTML, CSS, and JavaScript
- Game thumbnails (480x270 PNG, under 60 KB)
- Empty-state illustrations (unDraw)
- sitemap.xml, robots.txt

11. Scope Restrictions

The following must not be built:

1. Public-facing user accounts, login, or registration
2. Backend, API, database, admin panel, or CMS
3. Real-time multiplayer matchmaking, leaderboards, or achievement systems
4. Chat, friend system, or social networking features
5. Subscription plans or payment integration of any kind
6. Native iOS or Android apps
7. Multi-language support or AI-powered recommendations
8. Comments, ratings, reviews, email collection, or newsletter forms
9. Pop-up ads, interstitial ads, or crypto integrations
10. WordPress, Wix, or any third-party page builder
11. In-house game development

12. Acceptance Criteria

Delivery is accepted only when all of the following are confirmed:

1. All 20 games load without console errors and are playable end-to-end on Chrome, Firefox, Safari, and Edge
2. Category filtering and search work without page reloads
3. Share to Play copies the correct URL with ?ref=share and shows a 2-second toast
4. Lighthouse Mobile Performance score is 85 or above
5. First Contentful Paint is under 2 seconds on simulated 4G
6. GA4 captures game_start, game_end, share_click, category_click, and search_used events
7. AdSense code is present on the home page and every game detail page
8. sitemap.xml covers all public pages and robots.txt is present
9. About, Privacy, Terms, and Contact pages are live with correct content
10. README.md includes working setup and deploy instructions
11. No horizontal scroll on any viewport from 320 px upward
12. Fullscreen gameplay works on iOS Safari, Chrome Android, and desktop
